EDUCATION

Florida Atlantic University, Boca Raton, FL

Aug 2023 – May 2025

Master of Science, Computer Science, GPA: 3.7/4

Relevant Coursework: Analysis of Algorithms, Computer Data Security, Software Engineering, Cloud Computing, Cloud Security

Anantha Lakshmi Engineering College, JNTU, Anantapur

Aug 2016 – Apr 2020

Bachelor of Science, Engineering | Electronics & Communication, GPA: 3.2/4

SKILLS

Languages & Frameworks: JavaScript, Python, C, Core Java, Java with DSA, React.js, Node.js, Express.js, Node-RED, Material-UI, Kafka, Angular, Next JS

Tools, Platforms & Databases: Docker, Kubernetes, AWS, GitLab, Jira, VS Code, Linux CLI, Load Runner, Dynatrace, SQL, MongoDB

WORK EXPERIENCE

Full Stack Developer, 6D Technologies

Nov 2021 – Aug 2023

- Developed and maintained the Data Management System (DMS), a large-scale telecom solution for network monitoring, user data management, and operational issue resolution
- Built robust React.js interfaces integrated with APIs processing 1M+ data points monthly, improving data accuracy and reducing response times by 30%
- Designed secure backend APIs with Express.js, automated workflows with Node-RED, and integrated map-based monitoring with multiple security layers.
- Deployed scalable containerized applications using Docker and Kubernetes, leveraging Kafka for real-time data processing and Amazon EC2 for cloud hosting
- Provided technical mentorship, maintained full product ownership, and ensured a 99% production success rate through business-focused solutions
- Experienced in implementing CI/CD pipelines for seamless software deployment and proficient in Agile methodologies to ensure efficient project management, iterative development, and continuous improvement
- Acted as a mediator for a telecom client, utilizing Swagger API documentation and layered protocols to fetch data, modify response packets as per design, and send them back, ensuring efficient API communication.

Software Engineer, Cognizant Technology Solutions India Ltd

Apr 2020 – Nov 2021

- Developed and maintained API services for insurance coverage and service management pages, ensuring accurate data exchange and seamless application functionality.
- Implemented complex mathematical algorithms for insurance calculation logic, enhancing data precision and reducing processing time.
- Utilized JavaScript extensively to develop dynamic application features and optimize business logic for key financial operations.
- Integrated Key cloak authentication for secure access control and safeguarding sensitive client data.
- Rapidly learned and adapted to project requirements as a fresher, resolving critical bugs and enhancing platform stability.
- Followed the MVC pattern for Node.js API development, implementing error handling and validation at the controller level for all endpoints.

PROJECTS

TA Management System

- Developed a comprehensive TA Management System using GraphQL, React, Redux, and MongoDB, supporting four user roles: Administrator, TA Applicant, TA Committee, and Instructor. The system facilitates TA applications, candidate shortlisting, final selection, assignment, and feedback for future considerations, with Administrators managing TA positions. Served as the team lead, managing weekly stand-up calls, implementing design and logic updates

DevOps Task Manager

- DevOps Task Manager is a web platform using React.js, Redux, and TypeScript on the frontend, with a Node.js and Express.js backend. Hosted on AWS with EC2, S3, and RDS, it enables DevOps teams to manage tasks, automate deployments, and track performance efficiently with real-time updates and a responsive UI.

CERTIFICATIONS

- Code Path Certified – Intermediate web development (Fall 2024)
- Microsoft Certified – Azure DevOps Engineer Expert (AZ-400)
- Geeks for Geeks Certified – Data Structures and Algorithms
